Success with no-till – under any conditions – a Nuffield Scholarship report

RUSSELL MCKENZIE

PROJECT SPONSOR PARKLANDS AND PUBLIC REALM

Russell entered his scholarship wanting to find out if crop establishment with tillage was doing more harm than good. He will share his Nuffield travelling experiences, reporting on know-hows of no-till farmers from the extremes of dry in Australia to the opposite in Brazil and of many places in between. He found more sustainable systems than those of the 1970s, and with the addition of cover cropping, also the means of enhancing soil organic matter levels.
